

# **KPK** series

Unique design for superior performance in cut-off operations

Easy insert replacement

Strong clamping mechanism for added safety and security

Long tool life and stable machining with unique chipbreaker designs

Jet coolant-through styles available (JCT)

**High-performance cut-off solutions** 

# **KPK** series

Easy insert replacement reduces downtime. High performance, long tool life and stable machining with strong clamping mechanism.

#### **CUT-OFF SOLUTION**

During cut-off operations, insert cutting widths of only a few millimeters are used to cut to the center of the workpiece.

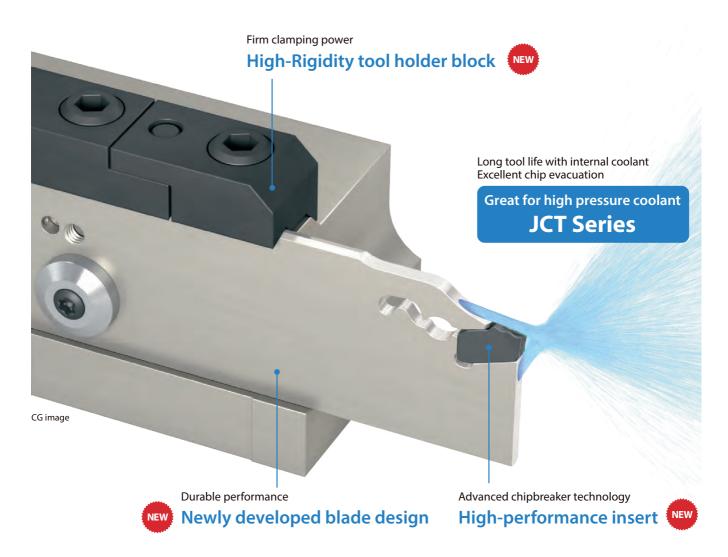

Cut-off process is typically a bottleneck process or final process, requiring a trouble-free machining environment.

Challenges

The shape of the workpiece can be difficult to secure, thus creating rigidity and chattering issues. Big load due to low/zero cutting speed at the workpiece rotation center. Tool tend to be broken easily by chip troubles.

**SOLUTION** 

The KPK Series features new insert, blade, and tool block designs for rigid, safe, and secure cut-off operations.

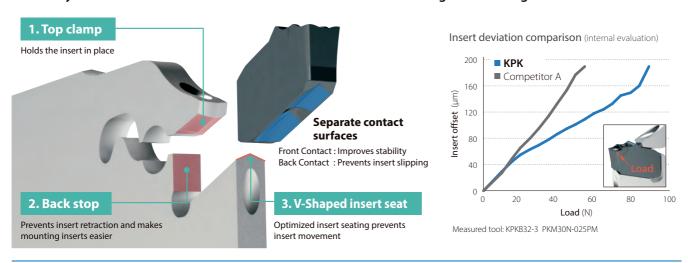

### 1 Easy insert replacement

## Firm insert clamp ensures added safety and security

#### The firmly secured insert uses three contact surfaces to eliminate sliding or chattering

 ${\bf Cutting\ performance\ comparison\ (Internal\ evaluation)}$ 

 $Cutting \ conditions: n = 320 \ min^{-1} (constant), \ Vc = \sim 100 \ m/min \ , \\ f = 0.12 \ mm/rev \ , \ Wet \ (External \ coolant) \ Workpiece: 34CrMo4 \ ( \emptyset \ 100) \ Cutting \ width: 3 \ mm \ (PM \ chipbreaker) \ depth{pmm}$ 

### Unique chipbreaker for long tool life and stable machining

#### Advanced chipbreaker technology inherited from KGD lineup provides excellent chip control

## **General use**

#### Insert grade

For steel: PR1625 For stainless steel: PR1535 For cast iron and aluminum: GW15

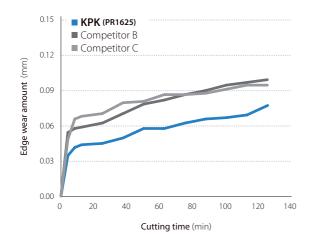

#### For tough edge and **High-feed machining**

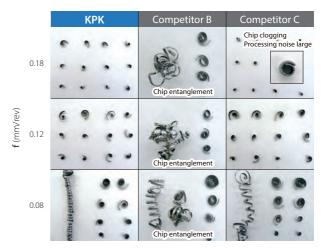

#### Insert grade

For steel: PR1625 For stainless steel: PR1535

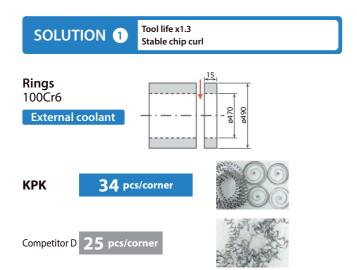

Wear resistance comparison (internal evaluation)

Cutting conditions :  $n = 955 \text{ min}^{-1}$  (constant),  $Vc = \sim 150 \text{ m/min}$ f = 0.12 mm/rev (~  $\emptyset$  10 : f = 0.05 mm/rev) Wet (External coolant) Workpiece: 15CrMo4 (ø 50) cutting width: 3 mm (PM chipbreaker) Chip control comparison (internal evaluation)

Cutting conditions:  $n = 780 \text{ min}^{-1}$  (constant),  $Vc = \sim 120 \text{ m/min}$ , wet (External coolant) Workpiece: 15CrMo4 (ø 50) cutting width: 3 mm (PM chipbreaker)

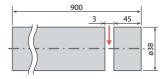

Cutting Conditions:  $n = 90 \text{ min}^{-1}$  (Constant),  $Vc = \sim 140 \text{ m/min}$ , f = 0.06 mm/rev, Wet (External Coolant) KPKB32-3 PKM30N-025PM PR1625 (User evaluation)

Machining efficiency double in stainless steel Achievement of stable machining

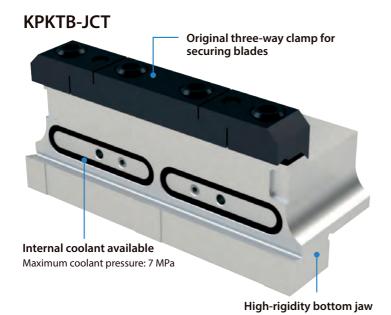

Cutting Conditions:  $n = 1,450 \text{ min}^{-1}$  (Constant),  $Vc = \sim 173 \text{ m/min}$ , f = 0.05 mm/rev(Pecking: 1 mm pitch), Wet (External coolant) KPKB32-3 PKM30N-025PM PR1535

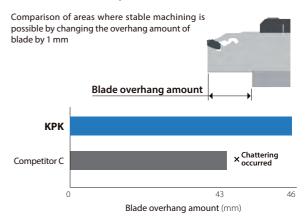

(User evaluation)

# 4

#### Rigid tool holder block prevents chattering and provides internal coolant

Chatter resistance comparison (internal evaluation)

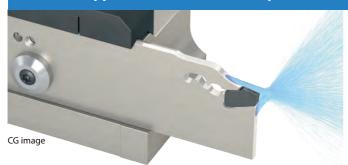

Cutting Conditions :  $n=650 \text{ min}^{-1}$  (Constant),  $Vc=\sim 100 \text{ m/min}, \ f=0.12 \text{ mm/rev}$  Wet (Internal Coolant : Normal pressure) Workpiece : SCM 435 (Ø 50), cutting width: 3 mm (PM chipbreaker)

Note

KTKTB type is compatible with internal coolant with an optional internal connector. (~ 1 MPa)

\*Refer to page 9 for the supply method (Type C).

#### JCT series supports internal coolant. Improved tool life even under normal pressure

KPKB-JCT maximum overhang length while using internal coolant is as follows: Size 26:40~mm Size 32:59~mm

Machine part
X5CrNi1810
Internal coolant

MPK

60 pcs/corner (Stable)

Competitor F

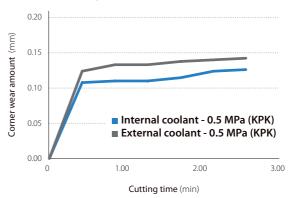

30 pcs/corner (Unstable)

Cutting conditions : Vc = 65 m/min (Constant), f = 0.06 mm/rev, Wet (Internal coolant 3.5MPa) KPKB32-3JCT PKM30N-025PM PR1535

(User evaluation)

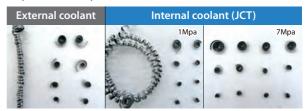

Coolant is supplied directly to the rake and the flank face of the cutting edge for increased tool life and improved chip control

Wear resistance comparison (internal evaluation)

Cutting Conditions : Vc = 30 m/min (Constant), f = 0.1 mm/rev, Machining depth : 10 mm, wet, workpiece : Inconel 718 (Ø 100) Cutting width: 3 mm (PM chipbreaker)

Chip Control Comparison (Internal evaluation)

Cutting conditions :  $n = 780 \text{ min}^{-1}$  (Constant), Vc = 120 m/min, f = 0.08 mm/rev, Wet, workpiece: 15CrMo4 (ø 50) cutting width: 3 mm (PM chipbreaker)

Includes only one **HSG1/8X8.0** plug.

KPKTB-LCT type block is also compatible with conventional KTKB type blades.

See page 10 for coolant piping parts.

When using internal coolant, the coolant may appear to leak slightly, but this should not affect machining performance.(If the O-ring is damaged, order separately.)

#### KTKTB/KTKTBF without coolant holes

Can be used with internal coolant by utilizing compatible coolant piping (CCN-5).

• : Available

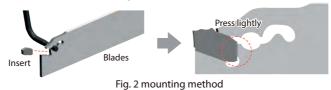

#### How to mount and remove the insert

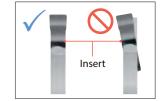

- 1. Insert provide wrench and turn in turning direction as shown in (Fig. 1)
- 2. Slide insert into the blade's insert pocket from the front and push in until the back of the insert contacts the blade's back stop surface. (Fig. 2)

Completely eliminate chips from the insert pocket and the wrench insertion area by using compressed air. Check to make sure the insert is straight and not tilted.

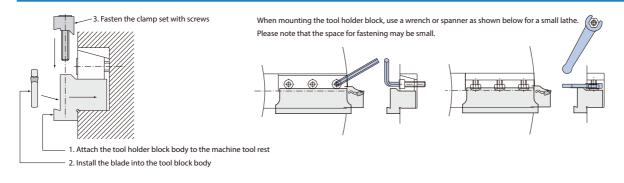

When removing the insert, follow the same procedure as shown in Fig. 2.

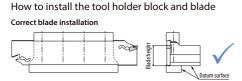

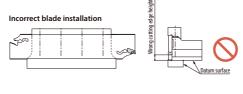

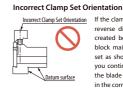

#### Installation guide

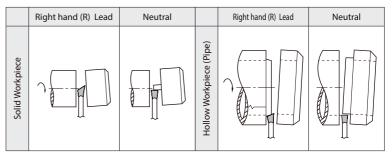

If the clamp set is mounted in the reverse direction, a large gap is created between the tool holder block main body and the clamp set as shown in the left figure. If you continue to use the product, the blade may break off. Reinstall in the correct orientation.

#### Lead angle direction and usage

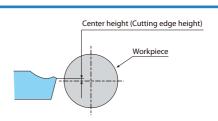

- 1. If there is no restriction on the finished shape, use an insert without lead angle.
- 2. Insert with lead angle is recommended to prevent remaining boss.
- 3. If you want to make the remaining boss smaller when machining small or thin parts, use insert with lead angle.

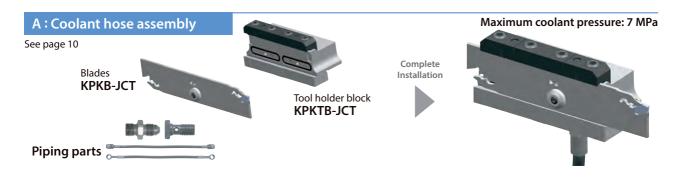

| له ا                          | N (Neutral) | R (Right hand)   | L (Left hand) |
|-------------------------------|-------------|--|---------------|
| Handed insert with lead angle |             | PSIRR  | PSIRL         |
| Handed                        | 9           | e (PSIR <sup>R</sup> /L) reduce burrs<br>gle (PSIR <sup>R</sup> /L), the smalle<br>o be smaller. | 9             |

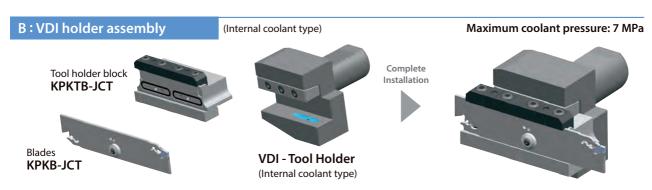

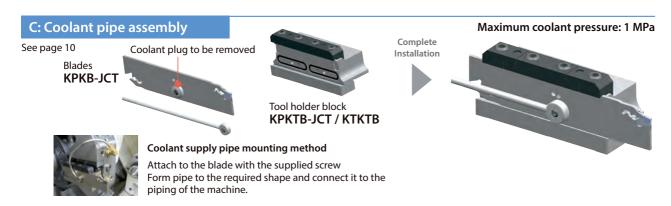

#### **Machining precautions**

- 1. Set cutting edge height 0.1mm above core height.
- 2. Machining with ample supply of coolant is recommended
- 3. Machine at constant speeds to gain stable tool life
- 4. Make the cut-off as close as possible to the chuck
- 5. To prevent impacts, reduce feed rate by  $1/2 \sim 1/3$  when nearing the center of the workpiece Excessive use of the insert may cause chipping or damage to the holder

#### **Precautions**

#### When mounting KPKB-JCT blade

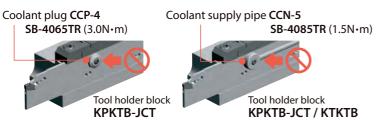

When using internal coolant, keep the arrow  $(\P)$  on the blade within the range marked on the tool holder block.

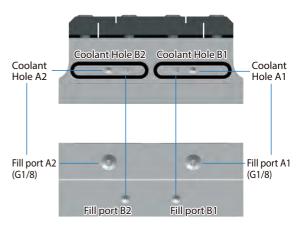

#### When the coolant plug and coolant supply pipe are mounted

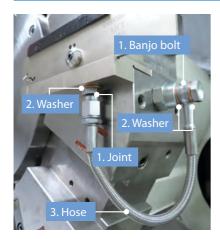

Coolant cannot be supplied correctly if it is mounted in the wrong position.

#### When using a tool holder block

When using the discharge port B1 (B2), use a sealant for the filler cap (HSG 1/8 X 8.0) of the accessory part of the coolant supply port A1 (A2).

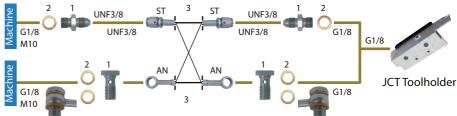

Easy to use with high-pressure hose and joint

Can be used for internal coolant at normal pressure without a high pressure pump unit Banjo bolts (for angled hoses) are also available.

#### <Piping Installation Guide>

#### Depending on machine specifications and piping methods, 1.Joint/Banjo bolt x2 2.Washer x2-4 3.Hose x1

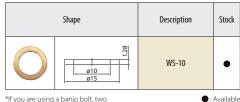

Pressure resistance: ~ 30 MPa

• : Available

#### 1.Joint/banjo bolt (Sold separately)

: Available

#### **Precautions**

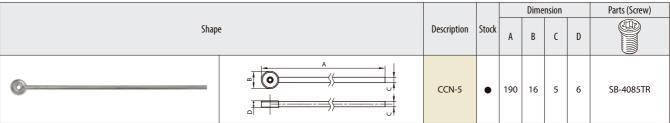

- 1. Make sure machine door is completely closed before use of these parts.
- 2. Use appropriate seal for the male thread of the piping parts and make sure the connection is secure. Use plugs to seal off unused coolant holes.
- 3. Connect and fasten the coolant hose firmly.
- 4. The use of copper washers may cause leakage but will have no effect on the performance.
- 5. Commercial piping parts can be used if the thread standards are same. Check the pressure resistance before use.
- 6. Regularly changing the coolant filter is recommended.
